MAXIMIZE PERFORMANCE

#0444 ADVANCED COOLING SYSTEM PROTECTION

01 // ABOUT

Designed to fortify coolants used in hybrid-electrical vehicles (HEV) and battery electrical vehicles (BEV) with advanced corrosion inhibitors. It is formulated for use in all types of ethylene glycol based, low-conductivity coolants used in indirect cooling systems.

Standard factory-fill coolant, on average, can allow up to 5 mg of metal loss and still meet OEM requirements . When adding MP Protect™ after a service, metal loss can be lowered to less than 1 mg, fortifying and extending the service life of new coolant.

02 // PRODUCT BENEFITS

- **Advanced protection for EV Coolants.**
- **Compatible with all types of coolant when used in indirect cooling systems.**
- **Fortifies and extends service life of new coolant.**
- **Lowers metal loss to less than 1 mg.**
- **Can help regulate EV Battery Temperatures.**
